

From growth to retention: what the data tells us

Six months of product data, three signals, and one decision.

01 ACQUISITION

Users are arriving faster every month

+88% monthly active users,
42K in January, 79K in June

02 RETENTION

Cohorts settle by month 3

62% still active
at month 6

03 ACTIVATION

Activation is the leak

8.4% of visitors become
paying customers

THE TAKEAWAY

Acquisition is accelerating, but activation remains the biggest growth lever.

+1.8K paid users a month if activation
rises from 66% to 80%

Growth accelerated throughout the half.

Monthly active users grew from 42K to 79K; the largest absolute gain came in June.

+ 88%

Six-month growth

37K additional monthly active users

+ 11K in June

Momentum increases the value of fixing activation.

The first month is the retention fault line.

Retention loses 18 points first, then flattens toward a 62% month-six floor.

Focus onboarding on reaching first value; later retention losses are substantially smaller.

Activation is the most actionable bottleneck.

The funnel is modeled from one month: 100K visitors, 32K sign-ups, 21K activated.

11K sign-ups never activate. Fix the first successful workflow before buying more traffic.

An activation experiment can unlock 1.8K paid users.

Scenario holds 32K sign-ups and 40% activated-to-paid conversion constant.

65.6%

Baseline activation

21K activated / 32K sign-ups

80%

Target activation

25.6K activated at the same traffic

+ 1.84K

Modeled paid lift

10.24K vs. 8.4K paid users
